Capital Protection Certificates offer protection for the invested capital at the end of the term and thus, they are particularly suited for safety-oriented investors as entry-level products to the capital market. Indices, single shares and futures contracts on commodities most commonly serve as underlyings for this type of certificate. At the end of the term, investors either participate directly in the positive performance of the underlying or receive a predetermined redemption amount depending on the underlying's price. **The following Capital Protection Certificates might currently present interesting investment options:**

Bonus Certificates combine the opportunity to generate sound returns with partial protection for the invested capital by the barrier. If the underlying always trades above the barrier during the observation period, the bonus amount – or in case of coupon-oriented Bonus Certificates the nominal value – will be paid out at the end of the term. Bonus Certificates are particularly suited for stagnating markets. In case of a barrier event, investors have 100% market risk of the underlying. **In the view of our experts, the following Bonus Certificates currently present interesting investment options:**

Express Certificates offer an annual opportunity for early redemption at a predefined amount, if the underlying quotes at or above the termination level at one of the valuation dates. If the underlying quotes below the termination level at the annual valuation date, the term extends by another year. At the same time, the potential termination price increases by a fixed percentage every year. In case of a barrier event, investors have 100% market risk of the underlying. **The following Express Certificates might currently present interesting investment options:**

Reverse Convertible Bonds provide for an attractive fixed interest rate above market level: The interest amount is paid out in any case, regardless of the performance of the underlying. If the underlying quotes above the strike at the end of the term, the certificate is redeemed at 100% of the nominal value. Otherwise, redemption depends on the performance of the underlying. In case of a physical delivery on the maturity date, only the stock with the lowest performance will be delivered. Barrier Convertible Bonds are additionally equipped with a protection mechanism. **Below you can find a selection of Reverse Convertible Bonds, which you might find interesting:**

The price of the Capital Protection Certificate is dependent on the underlying's price. Adverse performances of the underlying may cause price fluctuations of the Certificate during the term. If the Capital Protection Certificate is sold prior to the end of the term, there is the risk to incur a substantial loss of the invested capital (market risk). The capital protection of the nominal value applies solely at the end of the term. During the term, the price of the Capital Protection Certificate may drop below the agreed capital protection amount. During the term, the Capital Protection Certificate's price is subject to several influencing factors and need not develop simultaneously to and in accordance with the underlying's performance. Such influencing factors include e.g. intensity of the underlying's price fluctuations (volatility), interest rates, solvency of the issuer or remaining term. If the Capital Protection Certificate is sold prior to the end of the term, there is the risk to incur a partial loss of the invested capital. The Capital Protection Certificate's final terms may provide for a maximum payout. If the underlying is not quoted in the same currency as the Capital Protection Certificate and if the Certificate is not currency hedged, the foreign exchange rate influences the Capital Protection Certificate's price during the term (currency risk). Dividends and similar rights associated with the underlying are taken into account when structuring the Capital Protection Certificate and are not paid out.

The Bonus Certificate's price is subject to several influencing factors and need not develop simultaneously to and in accordance with the underlying's performance. Such influencing factors include e.g. intensity of the underlying's price fluctuations (volatility), bond interest rates, solvency of the issuer or remaining term. If the Bonus Certificate is sold prior to the end of the term, there is the risk to incur a partial or even total loss of the invested capital (price performance). If the underlying is not quoted in the same currency as the Bonus Certificate and if the Certificate is not currency hedged, the foreign exchange rate influences the Bonus Certificate's price during the term and may additionally increase a potential loss of the Bonus Certificate incurred due to the market risk (currency risk). Dividends and similar rights associated with the underlying are taken into account when structuring the Bonus Certificate and are not paid out.

The price of the Reverse Convertible Bond is dependent on the underlying's price. Adverse performances of the underlying may cause price fluctuations of the Reverse Convertible Bond. If the Reverse Convertible Bond is sold, there is the risk to incur a substantial loss or even a total loss of the invested capital (market risk). If the Reverse Convertible Bond's final terms provide for a barrier, this protective mechanism is suspended if the barrier is touched or undercut during the term and the Reverse Convertible Bond is then fully subject to market risk. The Reverse Convertible is subject to several influencing factors and need not develop simultaneously to and in accordance with the underlying's performance. Such influencing factors include e.g. intensity of the underlying's price fluctuations (volatility), interest rates, solvency of the issuer or remaining term. If the Reverse Convertible Bond is sold prior to the end of the term, there is the risk to incur a partial or even total loss of the invested capital (price performance). If the underlying is not quoted in the same currency as the Reverse Convertible Bond and if the Reverse Convertible Bond is not currency hedged, the foreign exchange rate influences the Bonus Certificate's price during the term and may additionally increase a potential loss of the Reverse Convertible Bond incurred due to the market risk (currency risk). Dividends and similar rights associated with the underlying are taken into account when structuring the Bonus Certificate and are not paid out.

The price of the Express Certificate is dependent on the underlying's price. Adverse performances of the underlying may cause price fluctuations of the Express Certificate. If the Express Certificate is sold, there is the risk to incur a substantial loss or even a total loss of the invested capital (market risk). If the Express Certificate's barrier is touched or undercut, the protective mechanism is suspended and the Express Certificate is fully subject to market risk (barrier event). The Certificate is then redeemed analogue to the underlying's performance or in the case of Express Certificates on single sales the shares are physically delivered. The Express Certificate is subject to several influencing factors and need not develop simultaneously to and in accordance with the underlying's performance. Such influencing factors include e.g. intensity of the underlying's price fluctuations (volatility), interest rates, solvency of the issuer or remaining term. If the Express Certificate is sold prior to the end of the term, there is the risk to incur a partial or even total loss of the invested capital (price performance). The maximum yield to be obtained from the underlying's performance is limited by the maximum payout (cap)). If the underlying is not quoted in the same currency as the Express Certificate and if the Express Certificate is not currency hedged, the foreign exchange rate influences the Express Certificate's price during the term and may additionally increase a potential loss of the Express Certificate incurred due to the market risk (currency risk). Dividends and similar rights associated with the underlying are taken into account when structuring the Bonus Certificate and are not paid out. The maximum yield to be obtained from the underlying's performance is capped by the maximum payout.

Issuer Risk/Creditor Participation ("bail-in"): Any payments during or at the end of the term of the certificates depend on the solvency of the issuer ("issuer risk"). Investors are therefore exposed to the risk that Raiffeisen Bank International AG might be unable to fulfil its payment obligations in respect of the described financial instrument such as in the event of insolvency ("issuer risk") or an official directive ("bail-in"). The resolution authority may also issue such an order before any insolvency proceedings if the issuer is judged to be in crisis. Under these circumstances the resolution authority has wide-ranging powers to take action (so-called "bail-in instruments"). For example, it can reduce the claims of investors in respect of the described financial instruments to zero, terminate the described financial instruments, or convert them into shares of the issuer and suspend investors' rights. More detailed further information is available at www.raiffeisencertificates.at/basag. A total loss of the capital invested is possible.

Past performance is no reliable indicator of future results. Please refer to the Base Prospectus for additional disclosures on risks as well as further information.
